Art Unit

1634

--The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. **THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS.** This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. ☒ This communication is responsive to 3/21/03.
2. ☒ The allowed claim(s) is/are 1, 2, and 4-23.
3. ☒ The drawings filed on Jun 1, 2001 are accepted by the Examiner.
4. ☐ Acknowledgement is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d).
a) ☐ All b) ☐ Some* c) ☐ None of the:
1. ☐ Certified copies of the priority documents have been received.
2. ☐ Certified copies of the priority documents have been received in Application No. _____.
3. ☐ Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).
*Certified copies not received: _____
5. ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
(a) ☐ The translation of the foreign language provisional application has been received.
6. ☐ Acknowledgement is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application. **THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.**

7. ☐ A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.
8. ☐ CORRECTED DRAWINGS must be submitted.
(a) ☐ including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached
1) ☐ hereto or 2) ☐ to Paper No. _____.
(b) ☐ including changes required by the proposed drawing correction filed _____, which has been approved by the examiner.
(c) ☐ including changes required by the attached Examiner's Amendment/Comment or in the Office action of Paper No. _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the top margin (not the back) of each sheet. The drawings should be filed as a separate paper with a transmittal letter addressed to the Official Draftsperson.

9. ☐ DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

Attachment(s)

- 1 ☐ Notice of References Cited (PTO-892)
- 2 ☐ Notice of Informal Patent Application (PTO-152)
- 3 ☐ Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 4 ☒ Interview Summary (PTO-413), Paper No. 0303
- 5 ☒ Information Disclosure Statement(s) (PTO-1449), Paper No(s). 3/19/02
- 6 ☐ Examiner's Amendment/Comment
- 7 ☐ Examiner's Comment Regarding Requirement for Deposit of Biological Material
- 8 ☒ Examiner's Statement of Reasons for Allowance
- 9 ☐ Other

Art Unit: 1634

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: The present invention is directed to a tagging-free method to detect the binding of untagged single stranded nucleic acid to an untagged material of interest, comprising the steps of:

(A) providing a sensor comprised of a first layer and a second layer wherein the first layer comprises an untagged single stranded nucleic acid and wherein the second layer comprises a photoluminescent material, and wherein the first layer and second layer are separate layer, and wherein the second layer comprises material selected from the group consisting of aromatic polymers, doped or undoped metal oxides, sulfides, arsenides, tellurides, and nitride or phosphide nanocomposites;

(B) exposing the sensor to a biological sample for sufficient time for the untagged single stranded nucleic acid to bind to an untagged material of interest in the biological sample;

C) applying light to the sensor; and

(D) measuring photoluminescence from the sensor, wherein photoluminescence measured in the step of exposing is indicative of binding of the untagged single stranded nucleic acid to the untagged material of interest.

Although, Bhargava et al. (U.S. Patent 6,241,819 B1) (June 5, 2001) teaches a photoluminescent material selected from the group consisting of aromatic polymers, doped or undoped metal oxides, sulfides, arsenides, tellurides, and nitride or phosphide nanocomposites,

Art Unit: 1634

Bhargava et al does not teach or suggest a tagging-free method to detect the binding of untagged single stranded nucleic acid to an untagged material of interest, comprising the steps of:

(a) providing a sensor comprised of a first layer and a second layer wherein the first layer comprises an untagged single stranded nucleic acid and wherein the second layer comprises a photoluminescent material, and wherein the first layer and second layer are separate layer, and wherein the second layer comprises material selected from the group consisting of aromatic polymers, doped or undoped metal oxides, sulfides, arsenides, tellurides, and nitride or phosphide nanocomposites;

(B) exposing the sensor to a biological sample for sufficient time for the untagged single stranded nucleic acid to bind to an untagged material of interest in the biological sample;

C) applying light to the sensor; and

(D) measuring photoluminescence from the sensor, wherein photoluminescence measured in the step of exposing is indicative of binding of the untagged single stranded nucleic acid to the untagged material of interest.

In view of the absence of either teaching or suggestion of such a tagging-free method to detect the binding of untagged single stranded nucleic acid to an untagged material of interest, comprising the steps of:

(a) providing a sensor comprised of a first layer and a second layer wherein the first layer comprises an untagged single stranded nucleic acid and wherein the second layer comprises a photoluminescent material, and wherein the first layer and second layer are separate layer, and

Art Unit: 1634

wherein the second layer comprises material selected from the group consisting of aromatic polymers, doped or undoped metal oxides, sulfides, arsenides, tellurides, and nitride or phosphide nanocomposites;

(B) exposing the sensor to a biological sample for sufficient time for the untagged single stranded nucleic acid to bind to an untagged material of interest in the biological sample;

C) applying light to the sensor; and

(D) measuring photoluminescence from the sensor, wherein photoluminescence measured in the step of exposing is indicative of binding of the untagged single stranded nucleic acid to the untagged material of interest, the present invention is novel and non-obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Arun Chakrabarti, Ph.D., whose telephone number is (703) 306-5818. The examiner can normally be reached on 7:00 AM-4:30 PM from Monday to Friday. If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Gary Benzion, can be reached on (703) 308-1119. The fax phone number for this
